

## Setting up Unix

### Step 1 :

Make sure that your computer is turned off and plug your usb key with unix in it.

### Step 2 :

Turn on the computer on and start hammering your F12 key until a menu opens, if no menu opens, restart this step.

### Step 3 :

Select your « Usb drive » and select « Ubuntu ».

### Step 4 :

Follow the steps to customize the installation (setting your language, etc).

### Step 5 :

Connect you computer to the Internet, make sure to secure it in the settings menu before doing anything else.

### Step 6 :

Create two new profiles, an administrator one (it's for emergency only) and a simple user one (you will be using this one).

### Step 7 :

You can now update your devices and drivers.

### Setup complete !

You can now use your computer with unix !

### *If you want to set up unix on virtualbox :*

*If you don't have virtualbox on your computer, you can download it on <https://www.virtualbox.org/wiki/Downloads>*
